PROFESSIONAL SUMMARY

Computer Engineering graduate with professional experience at Indra developing real-time embedded software in Ada — an environment that has shaped how I think about reliability, fault tolerance and robustness. Outside of work, I have built three production-grade Java/Spring Boot projects covering Event Sourcing, CQRS, fraud detection and microservices, all with Kafka, Docker and GitHub Actions CI. Looking for Java backend roles in international teams where I can combine both disciplines.

EXPERIENCE

Software Engineer — Ada / Linux · Indra

Torrejón de Ardoz, Spain · Oct 2024 – Present

- Development of real-time embedded software in Ada for mission-critical Linux systems, focused on performance and reliability.
- Implementation of business logic and process control in high-availability environments, with emphasis on fault tolerance and error handling.
- Full development lifecycle following the V-model: design, implementation, testing and validation under real-time constraints.
- Collaborative code reviews and system verification in structured Agile teams using Git.

Tech: Ada · C++ · Linux · Real-time systems · V-model · Git

Full Stack Developer — PHP / Laravel · Grupo Marwen Calsan

Mengíbar, Spain · Sep 2023 – Nov 2023

- Development and maintenance of web applications for small businesses using PHP and Laravel.
- Database management and REST API integrations; delivered features from design to production in a small Agile team.

Tech: PHP · Laravel · REST APIs · MySQL

SELECTED PROJECTS

Claims-events-application · <https://github.com/Jroogel11/Claims-events-application>

Insurance Claims Management — Event Sourcing + CQRS · 2025

- Built an insurance claims management system where every state change is stored as an immutable Kafka event, providing a full audit trail — a requirement in regulated industries.
- Implemented CQRS: write side publishes events to Kafka, read side projects them into a PostgreSQL read model, keeping reads and writes fully decoupled.
- Designed a state machine that validates legal claim transitions (DECLARED → UNDER_EVALUATION → RESOLVED → CLOSED), rejecting invalid transitions at the service layer.
- Wrote unit tests with Mockito covering claim creation, valid transitions and rejection of invalid ones; GitHub Actions CI on every push.

Tech: Java 21 · Spring Boot 4 · Apache Kafka · Event Sourcing · CQRS · PostgreSQL · Docker · Mockito · GitHub Actions

fraud-detection-service · <https://github.com/Jroogel11/fraud-detection-service>

Real-time Fraud Detection System · 2025

- Real-time fraud detection system with asynchronous transaction processing via Kafka and a configurable rule engine using the Strategy Pattern.
- JWT authentication with Spring Security; integration tests with Testcontainers running real Kafka and PostgreSQL instances.
- Full CI pipeline with GitHub Actions; Mermaid architecture diagram in the README.

Tech: Java 21 · Spring Boot 4 · Apache Kafka · Spring Security · JWT · PostgreSQL · Testcontainers · GitHub Actions

FinTrack_Project • https://github.com/Jroogel11/FinTrack_Project

Banking Microservices Platform • 2025

- Production-ready backend simulating a banking system with 4 independent microservices: API Gateway, Auth, Account and Transaction — each with its own PostgreSQL database.
- JWT authentication with access tokens (15 min), refresh tokens (7 days) and token rotation; asynchronous balance updates via Kafka.
- Full system containerized with Docker Compose (9 containers); 26 unit tests with JUnit 5, Mockito and AssertJ.

Tech: Java 21 • Spring Boot 3.4 • Spring Cloud Gateway • Apache Kafka • Spring Security • JWT • PostgreSQL • Docker • JUnit 5

EDUCATION

BSc in Computer Engineering

Universidad de Jaén, Spain • 2018 – 2024

- Final Thesis: Barbershop appointment management app with Google Calendar integration — React, Node.js, Firebase.

Erasmus+ Exchange Program

Uniwersytet Marii Curie-Skłodowskiej, Poland • Sep 2021 – Jun 2022

- International exchange in Computer Engineering in a multilingual environment.

CERTIFICATIONS

- **Complete Guide to Apache Kafka for Beginners** — LinkedIn Learning
- **Learning Spring 6 with Spring Boot 3** — LinkedIn Learning — Frank Moley
- **Spring Boot 3 Essential Training** — LinkedIn Learning — Frank Moley
- **English B1** — Official certification

SKILLS

Backend Java 21 • Spring Boot • Spring Security • Spring Data JPA • REST APIs • JWT

Messaging Apache Kafka • Event-driven architecture • Event Sourcing • CQRS • Producer/Consumer

Infrastructure Docker • Docker Compose • Linux • Git • Maven • GitHub Actions

Testing JUnit 5 • Mockito • Testcontainers • AssertJ

Other languages Ada • C++ • Python • JavaScript • PHP • React

Databases PostgreSQL • Firebase Firestore

Languages Spanish (native) • English (professional) • French (basic)
